Zoning concept

DOG FRIENDLY SPACE

The current use of the space is a dog park, which has a defined function and end-user. It is part of the new proposal to keep that as one of the main uses, giving the design versatility and a multifunctional character.

CULTURAL CONECTION

As part of the design guidelines, the new park should establish a connection with the c Sarah Morris sculpture square. For that reason, the proposed design includes a cultural amphitheater, giving the new park a cultural character, which will also have a visual and functional connection with the square.

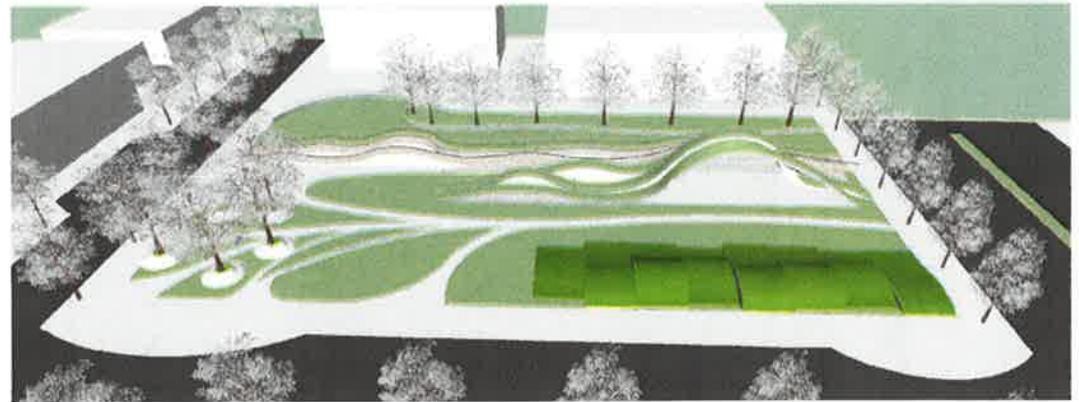

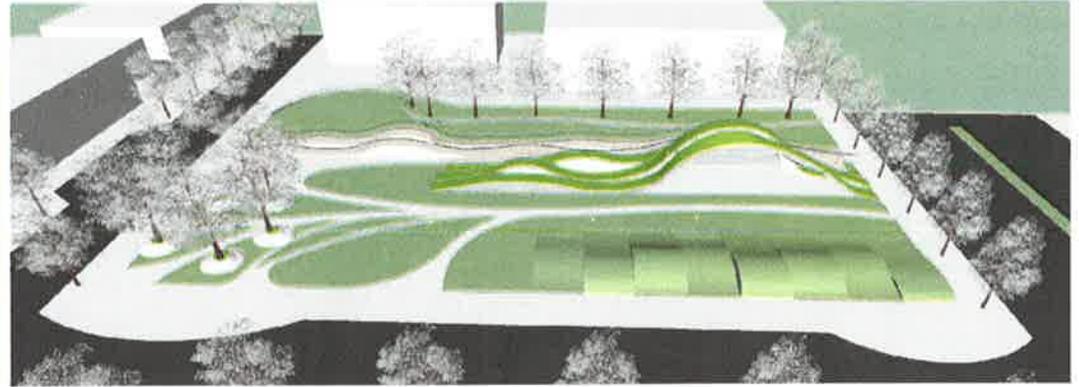

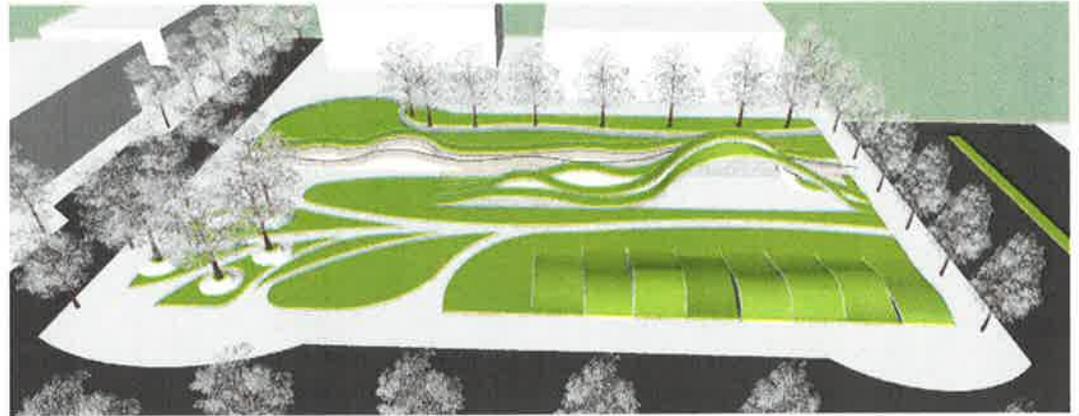

WALKING CONECTION

In order to maintain the pedestrian character of Key Biscayne, the design contemplates a pedestrian boulevard surrounded by gardens that serves as the threshold between the dog park and the amphitheater area.

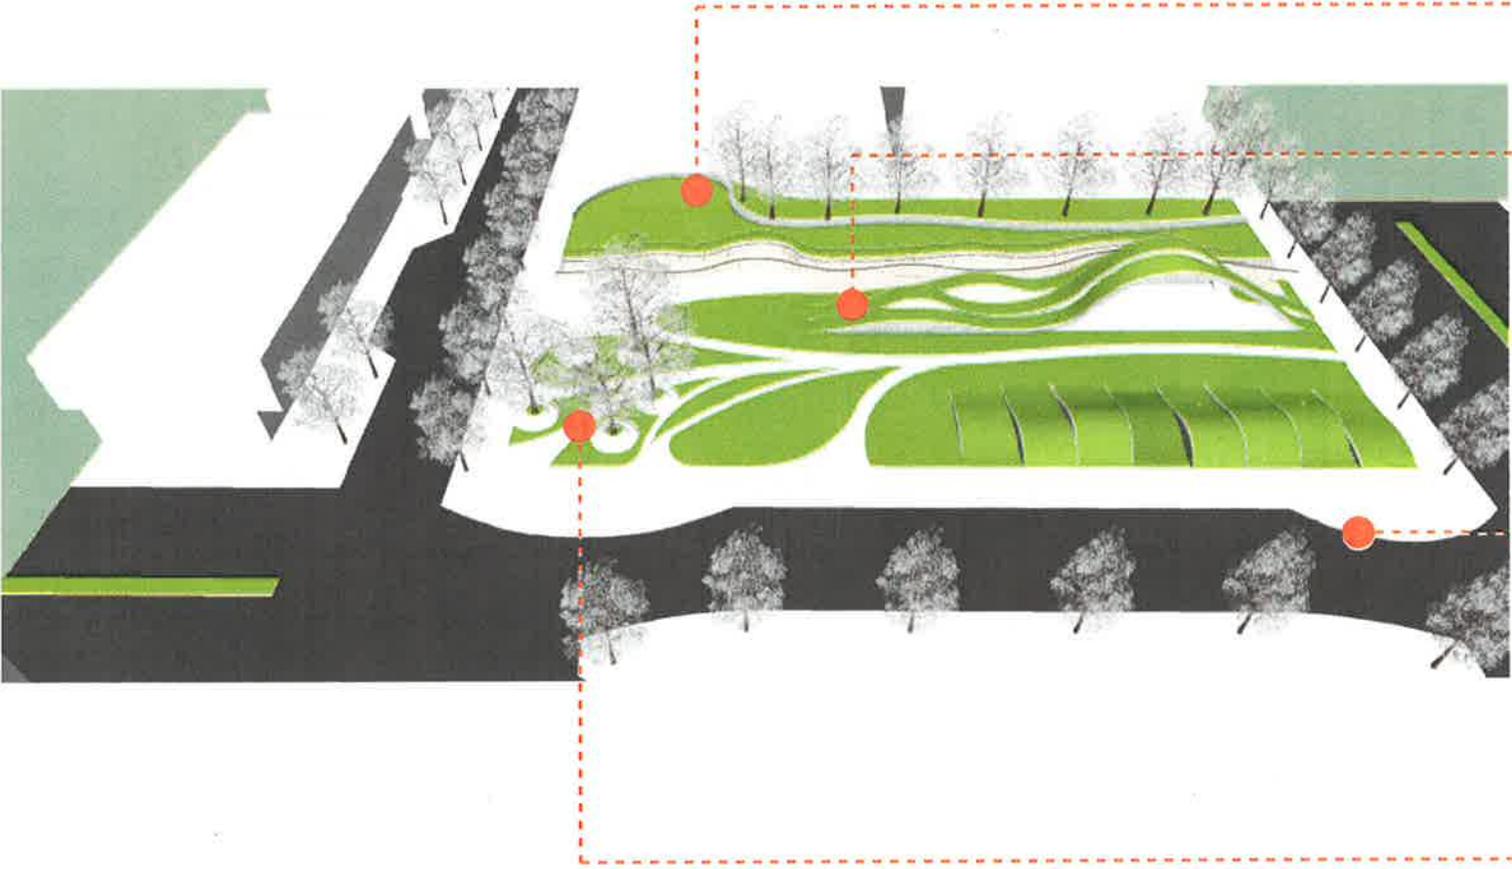

Zoning concept synthesis

Volumetric Concept

The current space is completely open and green. Perceptually, the emptiness of the open green space creates a singular spot in the key Biscayne grid, especially from the pedestrian point of view. Our idea is to maintain as much of the green as possible incorporating to the design paths and walkways that take pedestrian from one side to the other, experiencing the movement of the landscape. The landscape has taken inspiration from the key's surroundings.....the SEA. Path and mounds take visitors up and down as they walk through the park.
